

Node.js Static Website Hosting using ExpressJS

This PDF contains the complete setup and source code for creating a Node.js application that serves a static website using ExpressJS.

Requirements

Software	Purpose
Node.js	JavaScript Runtime
ExpressJS	Web Framework

Project Structure

```
static-site/  
├──  
│   ├── public/  
│   │   ├── index.html  
│   │   ├── style.css  
│   │   └── script.js  
│   └──  
│       ├── server.js  
│       └── package.json
```

Step 1: Initialize Project

```
mkdir static-site  
cd static-site  
npm init -y  
npm install express
```

Step 2: Create server.js

```
const express = require("express");  
const path = require("path");  
  
const app = express();  
  
// Serve static files  
app.use(express.static(path.join(__dirname, "public")));  
  
const PORT = 3000;  
  
app.listen(PORT, () => {  
  console.log(`Server running at http://localhost:${PORT}`);  
});
```

Step 3: Create public/index.html

```
<!DOCTYPE html>  
<html>  
  <head>  
    <title>Static Website</title>  
    <link rel="stylesheet" href="style.css">  
  </head>  
  <body>  
  
    <h1>Welcome to My Static Website</h1>  
    <p>This website is served using Node.js and Express.</p>  
    <button onclick="showMessage()">Click Me</button>
```

```
<script src="script.js"></script>

</body>
</html>
```

Step 4: Create public/style.css

```
body {
  font-family: Arial, sans-serif;
  text-align: center;
  margin-top: 100px;
  background-color: #f4f4f4;
}

h1 {
  color: #333;
}

button {
  padding: 10px 20px;
  font-size: 16px;
  cursor: pointer;
}
```

Step 5: Create public/script.js

```
function showMessage() {
  alert("Hello from JavaScript!");
}
```

Step 6: Run the Application

```
node server.js
```

Open the following URL in your browser:

<http://localhost:3000>
